THE QUESTION

What actually changes when an accounting firm adopts AI, and what does not?

THE SHORT ANSWER

Firms adopt AI well by being realistic. What changes is how work is prepared, reviewed and discussed with clients. What does not change is professional responsibility, client confidentiality and the need for qualified review. Choose one bounded workflow, a named reviewer and a decision date, and learn from a controlled pilot.

FOUR KEY IDEAS

1 Responsibility does not move

The professional who signs off remains accountable. Build review, source approval and data rules into the workflow before scaling.

2 Adopt by workflow

Opportunity and risk differ by task. Most risks are addressed by the same few controls: approved sources, citations, qualified review and a clear record.

3 People are the constraint

Review capacity and skill development decide success. Decide deliberately how juniors will still build judgment.

4 Pilot to decide

One or two workflows, a baseline, written success criteria and hard cases, ending in a recorded decision to expand, adjust or stop.

WHO SHOULD READ THE FULL PAPER

Accounting firm partners and practice leaders, quality and risk leads, and the managers who will run the first workflows and carry the change through the firm.

INSIDE THE FULL PAPER

What the full paper covers

#	SECTION	WHAT IT ANSWERS
1	What changes and what does not	A realistic view is the best protection against both hype and fear.
2	Where AI fits in firm work	Different workflows carry different opportunity and different risk.
3	Professional responsibility and client confidentiality	These are the parts of a firm's position that must be settled before anything else.
4	People: roles, skills and review capacity	Adoption succeeds or fails on people, not on technology.
5	Choosing the first workflows	The first workflows set the tone.
6	Pilot, measure, decide	A pilot is a decision tool.
7	A worked scenario: one firm, one workflow	An illustrative walk-through of a first pilot.
8	Quality and risk oversight across the firm	Adoption is not finished at the pilot.
9	Questions clients and staff will ask	Have an honest, consistent answer ready before you are asked.
10	Commercial and client-service implications	Technology changes how work is delivered.
11	An adoption roadmap	Five phases.

QUESTIONS THIS PAPER HELPS YOU ASK

☐	Which workflow is our first, and what makes it a good one?
☐	Who is the named reviewer, and do they have the capacity?
☐	What may be entered into the system, and who decided?
☐	How will juniors still develop professional judgment?
☐	What will the pilot decide, and by when?
